

VPN Setup in Macintosh OSX

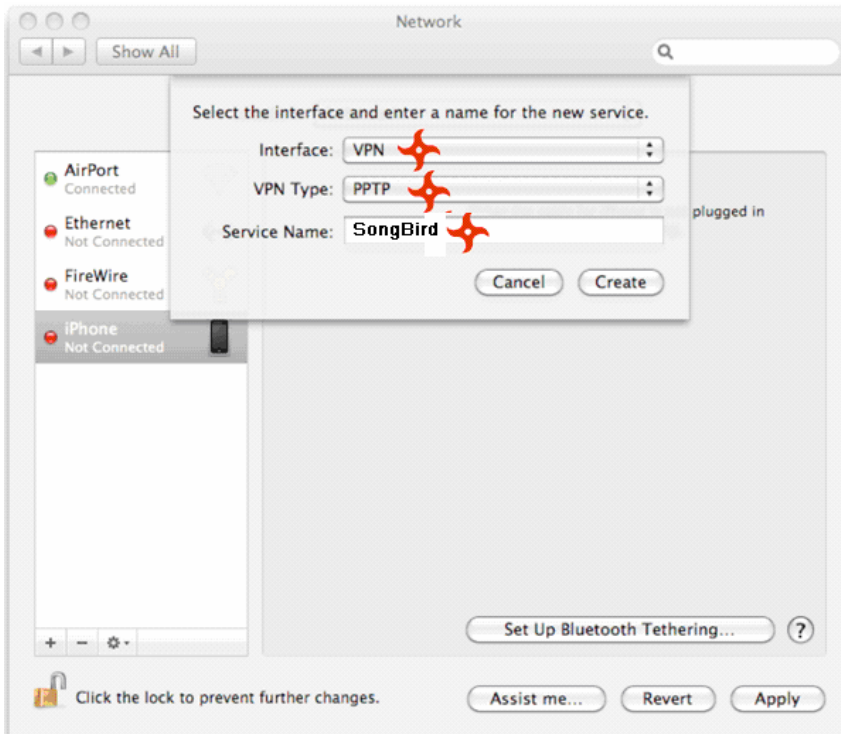

Open your System Preferences pane and select Network

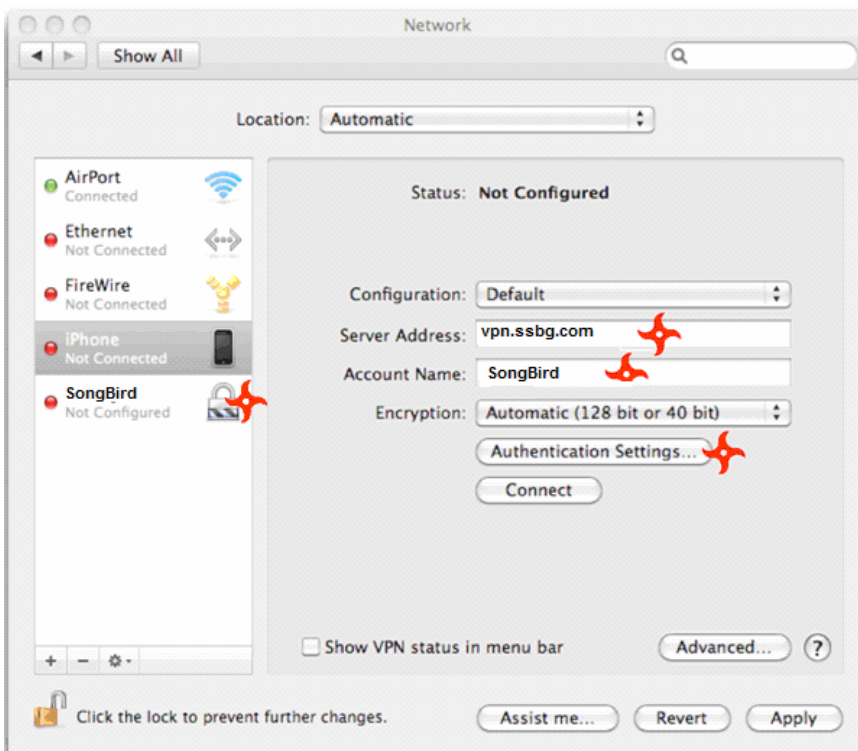

Choose the + icon in lower left corner to add a new network connection.

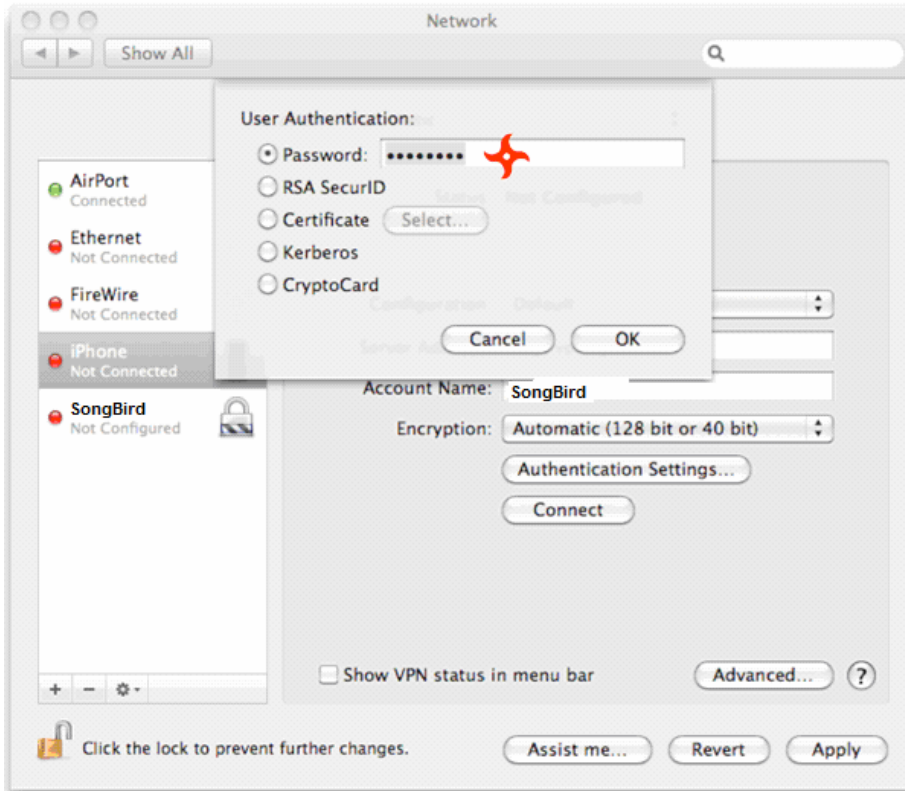

In the interface drop-down, choose VPN. In the VPN Type drop-down, choose PPTP. In service name type SongBird.

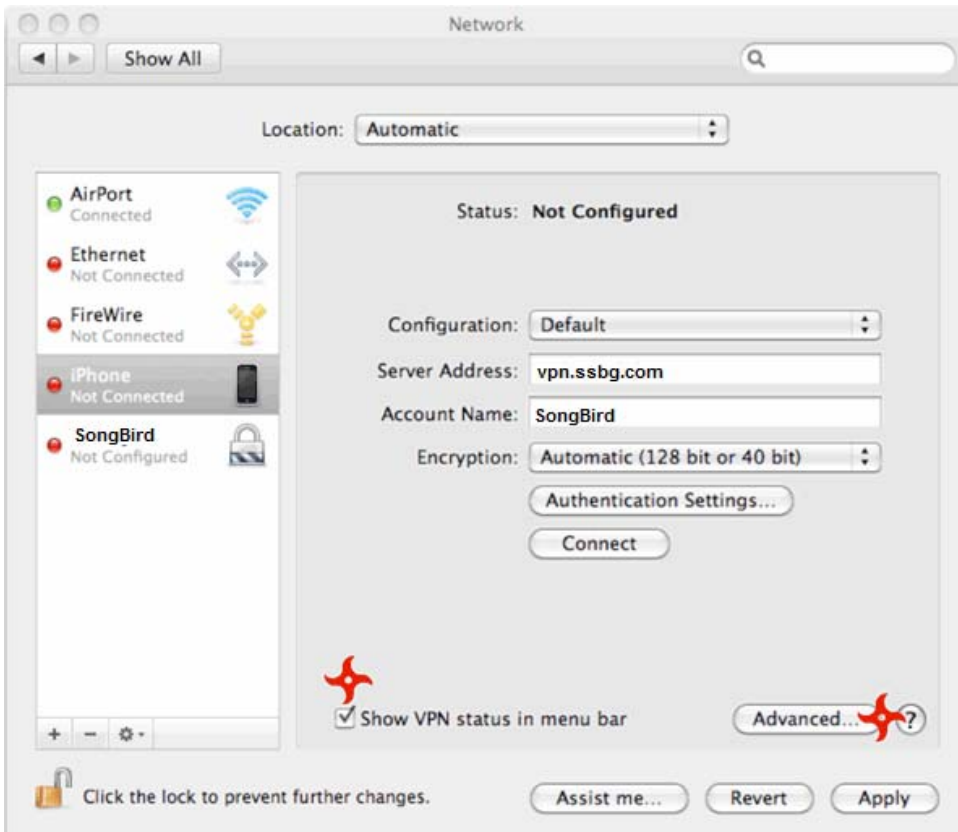

Click on your newly created network connection name on the left. In the Server Address field enter `vpn.ssbg.com`. In the account name field enter your username. Click on the Authentication Settings button

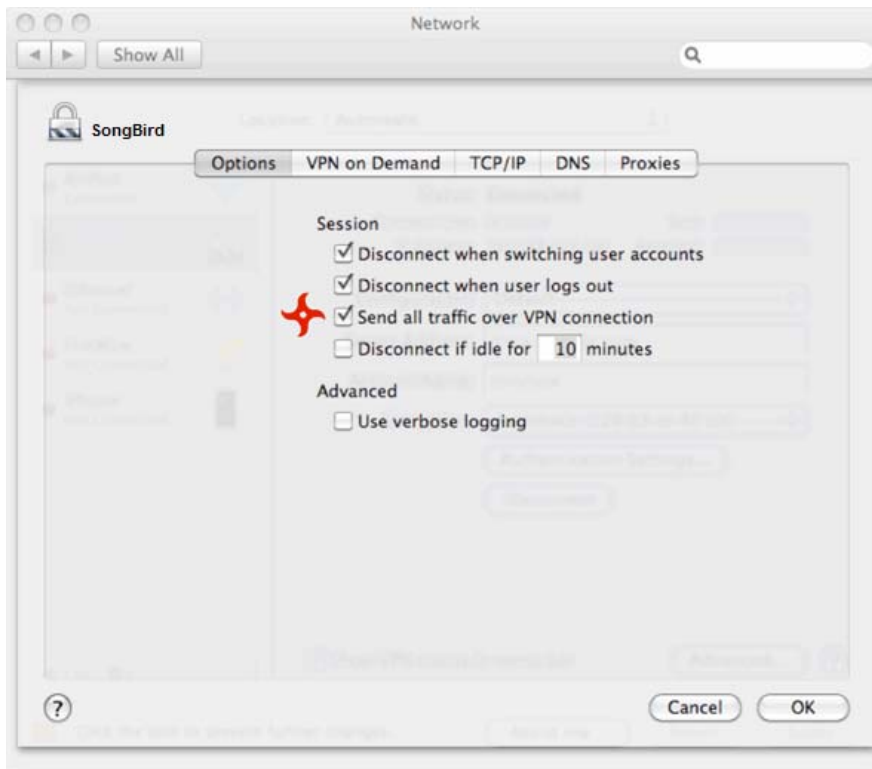

In the password field enter your password and click OK

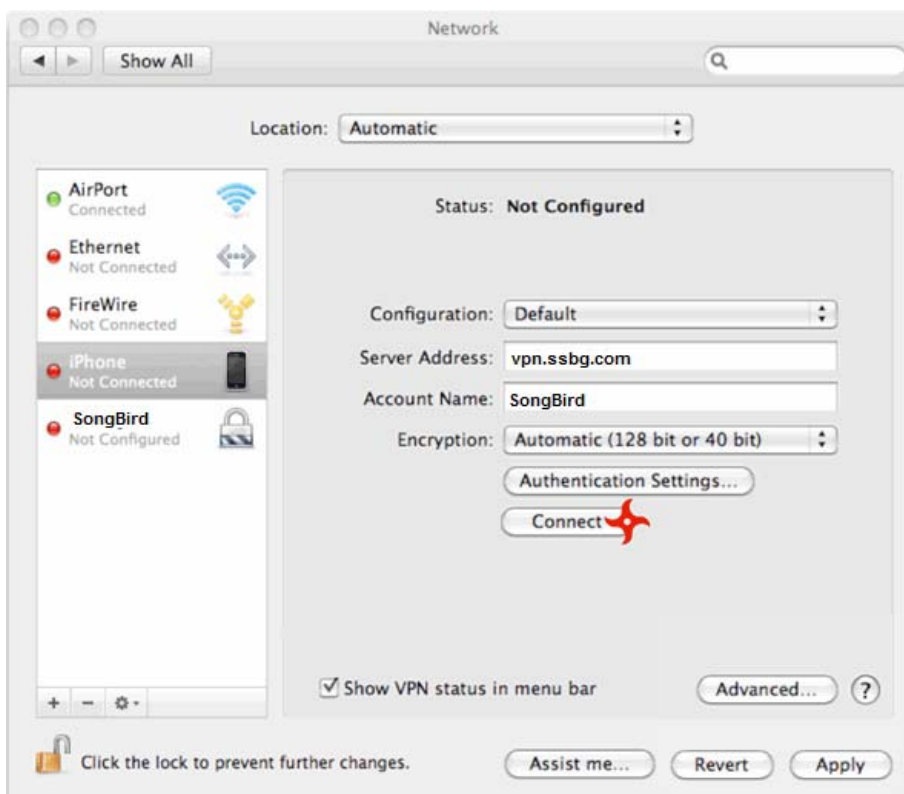

Check the Show VPN status in menu bar checkbox, and then click on Advanced

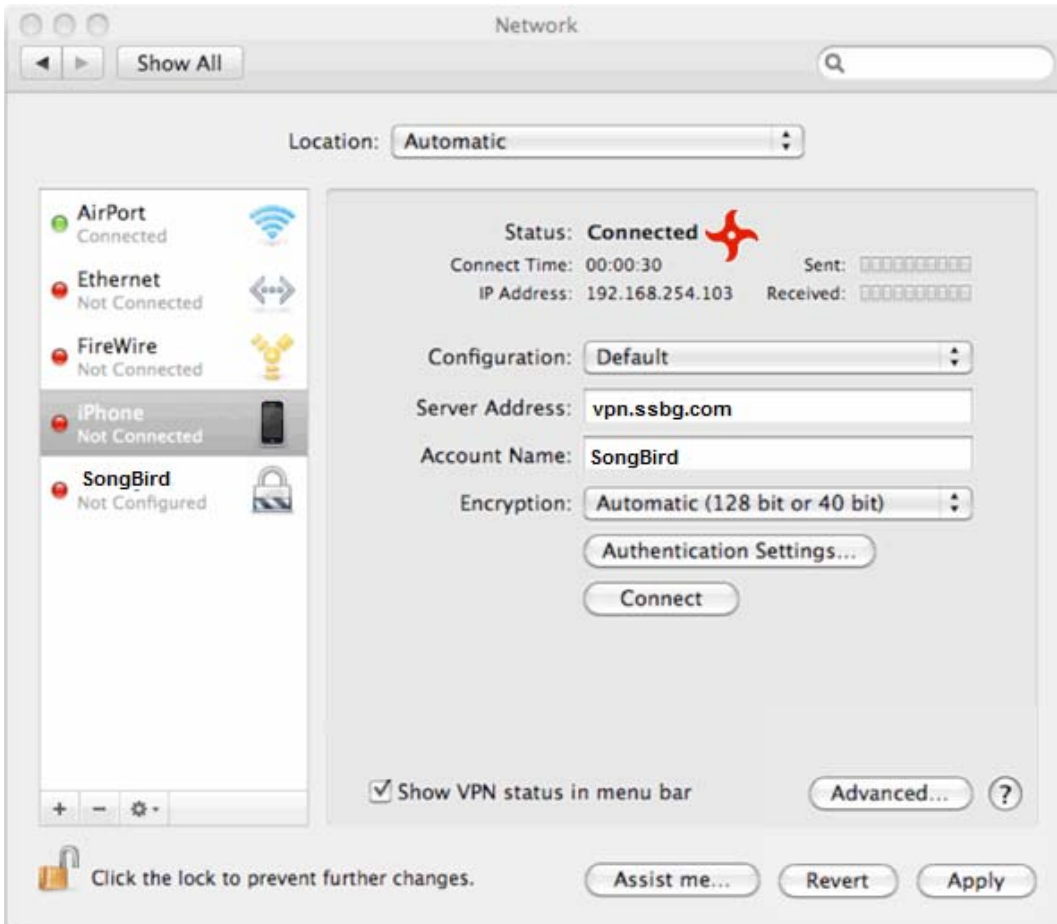

Make sure that send all traffic over VPN connection is checked and click OK

Click Apply to apply your changes. Clicking on Apply is very important - this connection will not work without it! Then click the connect button to activate the service (Make sure that you are currently connected to the internet)

Confirm that you are connected

Your VPN connection can be enabled, disabled, and tracked via the VPN switch icon on the menu bar.
